What is Bergamot Mint Essential Oil?

Bergamot Mint Essential Oil is derived from the leaves and flowers of the *Mentha citrate* plant, a member of the mint family. Despite its name, it is not related to the Bergamot fruit from which Bergamot essential oil is pressed. The name comes from its delightful scent, which combines the refreshing qualities of citrus with the soothing nature of mint.

The Origins of Bergamot Mint

Bergamot Mint, or *Mentha citrate*, is native to Europe and has been cultivated for centuries for its aromatic properties. This perennial herb thrives in temperate climates and is known for its lush, green leaves and delicate lilac flowers. The essential oil is steam distilled, capturing the essence of the plant in a concentrated form.

The Distillation Process

The essential oil is extracted through steam distillation, a method that preserves the integrity of the plant's compounds. During this process, steam is passed through the flowering tops and leaves, which then releases the oil. This method ensures the purity and potency of the oil, making it effective for therapeutic and aromatic uses.
