Understanding Cedarwood-Texas Essential Oil

Cedarwood-Texas Essential Oil comes from the *Juniperus ashei* tree, commonly known as the Texas Cedarwood or Mountain Cedar. This tree predominantly grows in the United States, particularly in Texas's mountainous regions. Unlike other cedarwood oils sourced from the Eastern or Himalayan variants, the Texas variety has its unique composition, contributing to its distinctive scent and therapeutic properties.

The Distillation Process

The steam distillation process is used to extract the essential oil from the wood of the Texas Cedarwood tree. This technique preserves the natural integrity and aromatic essence of the oil. As I learned more about this meticulous process, it became clear to me how the steam carries the essential components of the wood, capturing its finest attributes in each droplet of oil.
