# Chamomile German Blue Essential Oil

## Overview

Chamomile German Blue Essential Oil has been revered since ancient times for its calming properties. Known for its vivid blue color and robust fragrance, this oil is extracted from the flowers of the *Matricaria chamomilla* plant. Unlike its close relative, Roman Chamomile, this variant boasts a thicker consistency and a spicy, earthy scent. Its distinctive composition makes it a favorite for various therapeutic and cosmetic applications.

## **Origin and Extraction**

The oil is primarily sourced from certified organic farms in regions like Egypt, though the Chamomile plant is native to Europe and Asia. The extraction process involves steam distillation of the blossoms, ensuring the preservation of its potent therapeutic compounds.

## **Aroma and Constituents**

With a heavier and earthier fragrance compared to other chamomile oils, the aroma of Chamomile German Blue is not just a sensory delight but a key indicator of its quality. The primary constituents include chamazulene, bisabolol, and farnesene, which contribute to its anti-inflammatory and calming effects.
