Lime Steam Distilled Organic Essential Oil: Aromatic Excellence

Product Overview

Lime Steam Distilled Organic Essential Oil, also known as West Indian Lime, Key Lime, Mexican Lime, and Omani Lime, is derived from *Citrus aurantifolia*. Originating from Sri Lanka and native to Southeast Asia, this refreshing essential oil is extracted from the peel through steam distillation, a method that significantly reduces phototoxic concerns. The choice for steam distillation over cold pressing lessens any sensitivity to sunlight, making it safer for topical applications.

Aroma and Composition

The aroma of lime essential oil is a soft, zesty scent that is both slightly fruity and more tart than sweet. As a top note in fragrance profiles, it provides an initial burst of brightness before the scent gradually evolves. The oil's composition includes key aromatic compounds such as α -Pinene, β -Pinene, Myrcene, and D-Limonene, each contributing to its distinctive scent and potential therapeutic benefits.
