The Origins of Neroli Essential Oil

Neroli oil, with its roots buried deep in history, traces its origin back to the region surrounding the Mediterranean and parts of Africa. The oil is extracted from the sweet-

smelling blossoms of the bitter orange tree, scientifically known as *Citrus aurantium*. It's said that Princess Anne-Marie of Nerola, Italy, popularized the use of this oil in the 17th century, lending it its regal name. What makes it truly significant is its use in both modern-day aromatherapy and historical medicinal practices, showcasing its timeless appeal and efficacy.

How Is Neroli Essential Oil Made?

The journey of Neroli oil from flower to bottle is as captivating as the oil itself. It's typically produced through a process called steam distillation, which carefully extracts the oil from the blossoms to preserve its radiant scent and properties. Interestingly, it requires about a thousand blossoms to produce just one pound of this precious oil, making it both a labor-intensive and treasured product.
