## The Origins of Niaouli Essential Oil

Niaouli essential oil is extracted from the leaves and twigs of the *Melaleuca quinquenervia* tree, native to Australia and the South Pacific islands. Often overshadowed by its more famous cousin, tea tree oil, Niaouli has its own distinct qualities and uses. The indigenous people of these regions have used the plant for centuries, long before we learned about its

uses in modern aromatherapy and holistic healing. The local tribes were versed in harnessing its antibacterial and antiviral properties using traditional methods. Today, we're rediscovering its significance, with companies distilling its leaves to capture the oil's potent compounds.
