The Origin of Ravensara Essential Oil

Ravensara essential oil is derived from the leaves of the Ravensara aromatica tree, which is endemic to Madagascar. The tree thrives in the lush, tropical climate of this island nation, contributing to the unique properties and robust medicinal profile of the oil. This essential oil has been traditionally used by the indigenous people for its immense health benefits and aromatic qualities.

Understanding the Extraction Process

The essential oil is obtained through a process called steam distillation. Fresh leaves are

harvested and subjected to steam, which helps extract the volatile compounds contained within the plant. This process captures the true essence of the plant, resulting in a potent and highly concentrated oil. Thanks to this method, Ravensara essential oil retains its therapeutic properties.
