What is Yarrow Essential Oil?

Yarrow Essential Oil is extracted from the Yarrow plant, scientifically known as *Achillea millefolium*, a perennial herb known for its delicate, fern-like leaves and clusters of small, aromatic flowers. Native to the temperate regions of the Northern Hemisphere, this plant carries a rich history dating back to ancient times when it was used for its medicinal properties. The oil itself is renowned for its vibrant blue color, thanks to the presence of chamazulene, a compound with potent anti-inflammatory properties.

The Extraction Process

The extraction of Yarrow Essential Oil is an art as much as it is a science. The process involves steam distillation of the plant's flowering tops and leaves. This method ensures the delicate aroma and therapeutic properties of the oil are preserved.
